Handling Multimedia Chats

Task Points: 200

Task Status: **Completed**

Task details

User can only send messages as of now.

That is really sad as there are users who want to send images, videos and other files as well.

How on Earth will they do that?

Go through this [video](#) and understand how does Tinder (Dating App) store images. This would help you quite a lot.

Deliverable

1. Enable file sharing in the group chat app. I hope you remember how to store files , right? You can use AWS s3 or Azure blob storage whatever you are comfortable with.
2. The file sharing should be seamless and should not fail.

Push the code to git and upload commit iD and also Deploy it.
