

Description

Hints

Make the Login backend api

Task Points: 100 ~~200~~ ?

Task Status: **Completed**

Task details

Make the login backend api

Deliverables

1. Recieve the object from the frontend which comes as a POST request
2. Encrypyt the password and check in the db if the password matches
3. If the password matches, create a jwt with the help of the secret key. Also encrypt the id in the jwt.
4. Send the jwt to the frontend.
5. If the password isnt correct send response 401 (User not authorized)
6. If the user doesnt exist **send a response 404 (User not found)**

You can also go through this documentation to understand the steps
