Making Multiple Groups [Most Important Task]

Task Points: 200 ~~400~~ ?

Task Status: **Completed**

Task details

Congratulations!! Your app is getting a lot of attraction and more and more people want to join it. Some people want to form their own groups and **make their friend join their own group**.

DELIVERABLE

1. Design a system where users can **form their own groups like the way in whatsapp**.
2. They should be able to **name the group** and **Invite other users** to join their group just the way it is like in whatsapp
3. Users should be able to see the **groups they are a part of on the left side of the screen**, so that they can switch between multiple groups easily.
4. Only people who are a part of the group should be able to see all the message that have been sent in the group.
5. Pay a lot of emphasis on **DB Schema Design** and try making the **APIs as lightweight as possible**.(No api should send a lot of data). Try doing by yourself first,if stuck for long check hint

You are free to make assumptions and whenever you are stuck with any feature, just think the way it has been implemented in whatsapp.

Push the code to git and upload the commit ID
