

Description

Hints

Your app will fail badly

Task Points: 100 ~~200~~ ?

Task Status: **Completed**

Task details

One very big problem of the app is that it is not scalable.
Continuously calling the backend using setInterval would put a lot of pressure on your server.
Moreover, it is not required to call the backend again and again if no user has sent you a message.
You should only call the server whenever a user has sent a message. [Most efficient]

Enter the concept of socket to rescue.

[Watch this video](#) to understand how sockets work and how it is better than continuous polling(setInterval method).
This is the [github resource link](#) incase if you want to try by yourself and see the optimised chat app

Deliverable - [Faourite interview question by interviewers]

Optimize your group chat app such that setInterval is no longer required .
Use sockets to solve this problem.

Your Answer

ok
